

Engineered Drainage Plans/Report

For the purpose of this permit, we are not requesting any new construction on our farm. However, please note, in 2018 we applied for and received a grant from the Kitsap County Conservation District. With their assistance, we were able to install two separate rain gardens to address storm water runoff from our existing buildings including our main house, utility building and garage. It is important to us to protect our land, the environment and Barker Creek.
